

AI-BASED SUICIDE RISK PREDICTION & EARLY INTERVENTION SYSTEM

Architecture of the Proposed Methodology

GOAL: To predict the level of suicide risk among college students using machine learning models and provide early intervention suggestions to help in prevention.

SIGNIFICANCE & IMPACT

STATISTICAL SIGNIFICANCE

- Validates the relationships between variables and suicide risk
- Ensures the results are not due to chance
- Increases reliability of the proposed model

PROJECT OUTCOMES

- Accurate prediction of suicide risk levels
- Identification of key influencing factors
- Data-driven insights for prevention strategies
- Supports decision-making for counselors and institutions

REAL-WORLD BENEFITS

- Helps educational institutions in early identification
- Enables timely intervention and support
- Contributes to reducing suicide rates among college students
- Promotes mental well-being and safer campuses
